The iBEAM goal is to bring innovation and value to every product in the revolutionary line of Vehicle Safety Systems. iBEAM products feature high levels of engineering with the installer in mind, while using only the finest materials available. This combination provides maximum performance in all price ranges.

Does your vehicle have more blind spots than a bat? See the light with a backup sensor, rear-view camera or blind spot detector to visualize what’s around you, and help with parking. Aftermarket cameras, monitors, sensors and complete systems are available for any type of motor vehicle.

Rear-view cameras are typically mounted on the back of the vehicle and offer wide-angle lenses that help you see everything from the left to right bumper of your car. They’re angled to the ground, so you can see the road behind you, as well as any children or objects in the way. According to the NHTSA, such camera systems have the best potential to reduce back-over accidents out of any vehicle sensory technology they have tested.
