COMPONENTS

AX-BXLOC2-PRO Line Out Converter (LOC)
Bass Knob

TOOLS RECOMMENDED

- Digital Multi-meter
- Test Tones

SALES 386-257-2956

Universal Premium LOC

The Axxess **AX-BXLOC2-PRO** is a compact premium line output converter with active input circuitry, which allows it to accept speaker-level signals of up to 400 watts per channel from factory-installed source units or amplifiers. It converts them to high-quality pre-amp signals that can then be directed to aftermarket amplifiers. The **AX-BXLOC2-PRO** offers **Built In Load Resistors** for those factory radios or amplifiers that stop passing audio when OE speakers are disconnected. The built in load resistors trick the factory equipment to pass audio into the Proscenium LOC allowing easy audio upgrades. Many of these factory audio systems regulate lower frequencies to prevent potential damage to the OE speakers, which is not a desirable feature when wanting to add subwoofers to your OE system. Some OE radios and amplifiers can reduce the output of low frequencies as the volume is increased. Having a product with a Bass-X restoration circuit in the LOC will allow users to enjoy their music as it was recorded. Users can enjoy maximum sound quality while maintaining the use of factory volume and steering wheel controls. A bass remote control with digital voltmeter is included, so that you can monitor your car audio amplifier voltage to prevent damage to all your car audio equipment.
